

Canola Seed Treatments: Understanding protection options and efficacy

Canola with base insecticide and fungicide seed treatments

-  Insecticide treatment
-  Fungicide treatment

Canola with enhanced blackleg fungicide seed treatment

This side demonstrates protecting early growth stages from flea beetle damage and some seedborne and seedling diseases, under favourable growing conditions.

This side demonstrates protecting early growth stages from both airborne and seedborne blackleg spores as well as other seedborne and seedling diseases, under favourable growing conditions.

Seed treatment efficacy duration **is impacted by environmental conditions, disease and insect pressure.** Discuss specific conditions with your seed supplier or agronomist. Read more at CanolaEncyclopedia.ca
